

Calaveras/Tuolumne Co. Soil Survey

- 1) Fine-silty soils, thermic, foothills, phyllite/schist

2) Fine-loamy soils, thermic, foothills, meta-basalt/meta-andesite

3) Andosols, mesic, forested mountain ridges and slopes

4) Fine/fine-loamy soils, mesic, forested moutains, granite/diorite
- 5) Shallow, thermic soils formed on basalt flows

6) Fine/fine-loamy soils, mesic, low elevation mountains, phyllite/schist

7) Mesic soils associated with marble and rhyolitic tuff

8) Fine/fine-loamy soils, thermic, foothills, granite/diorite
- 9) Shallow/skeletal soils, thermic, hills, tertiary volcanics/pliestocene gravels

10) Loamy-skeletal/fine soils, mesic, low elevation mountains, phyllite/schist

11) Shallow/high-Mg soils, thermic, foothills, serpentinite

12) Shallow/skeletal soils, thermic, foothills, slate
- 13) Shallow/fine soils, thermic, old terraces and exumed paleosols, Eocene conglomerate
